Senior Full-Stack Developer with 10+ years of experience. Specialized in crafting efficient, scalable web applications leveraging the power of Drupal, WordPress, Laravel, and LAMP. Adept at ensuring functionality, performance, and user experience are seamlessly integrated to produce impactful digital solutions.

Work Experience

Full-stack Developer

Self-employed
May 2023 to Present

Senior Drupal Developer

Promet Source
September 2021 to May 2023

At Promet Source, I was a catalyst for delivering customized Drupal solutions, adept in Drupal 7, 8, 9, and 10. My role involved crafting optimal web performance and security by effectively navigating migrations and leveraging each version's unique capabilities.

I was hands-on in customizing modules and themes, balancing aesthetic allure with operational excellence. My intricate migrations across Drupal versions assured seamless transitions and data integrity, contributing to a high client satisfaction rate.

Responsibilities:

- Spearheading migrations, particularly adept in transitions between Drupal 7, 8, 9, and 10.
- Customizing modules/themes, tailoring web solutions to align with specific client needs.
- Ensuring operational and security optimization in each Drupal version implementation.

Achievements:

- Successfully led migrations, ensuring websites were fully optimized to harness each Drupal version's capabilities.
- Achieved a high client satisfaction rate, thanks to personalized and effective Drupal solutions.

In each project, my commitment was underscored by technical excellence, innovation, and the transformation of client visions into tangible, high-performance digital platforms, each echoing the strengths of Drupal 7, 8, 9, and 10.

Senior Web Developer

Homeward

May 2019 to September 2021

I served as a Contractor Full-Stack PHP Web Developer at Homeward, a company dedicated to revolutionizing the home buying experience. During this time, I was integral in merging innovative tech solutions with Homeward's objective of streamlining and enhancing the home buying journey.

Key Responsibilities and Achievements:

- **Proprietary Platform Development:** Contributed to the design and evolution of Homeward's bespoke platform, implementing PHP, Laravel, and Drupal to facilitate a more straightforward and assured home buying experience.
- **Web Applications:** Engineered responsive web solutions, focusing on user experience, and aligning with the company's mission. My involvement accelerated the realization of a user-centric, efficient home buying process.
- **Backend Infrastructure:** Crafted secure and scalable backend systems using PHP and Laravel, ensuring data integrity, efficiency, and responsiveness.
- **Drupal Integration:** Applied my adept Drupal skills to enhance content management, SEO optimization, and interactive features, making the home buying process informative and engaging.
- **Quality Assurance:** Maintained a stringent focus on quality, contributing to Agile processes, and continuous integration practices to ensure the delivery of premium, error-free applications.

My Role:

Amidst a landscape of technology and real estate, my role was characterized by the integration of robust PHP coding, Laravel's sophistication, and Drupal's content management prowess. Each project echoed my commitment to aligning technology with user needs, ensuring every piece of code translated into enhanced user experience and operational efficiency in the home buying journey.

Senior Software Engineer

PARCE

July 2013 to May 2019

Working with PARCE, I was involved in many different projects that used WordPress, Drupal 7 and 8. Here's a bit about what I did on each one:

Here's a snapshot of my journey and the roles I embraced:

- Plugin Development
- Headless CMS
- Backend API Development
- Theme Customization
- Version Migration
- SEO Integration
- Multi-Language Support

Projects:

- Baker Hughes

I made advanced parts for the website using Drupal 8. This helped the team put up content in different ways easily. I also made sure the website was easy to find on Google with real-time SEO using Yoast.

- IAmLife

I handled the backend part of this social networking site. It was a bit complex because it was disconnected from the front end (decoupled). I added a shopping and shipping feature using a special module.

- SynCal

This is a tool I worked on that lets you sync events to Google Calendar and others. It's a Drupal 8 module and can add, update, or delete events easily.

- FLEXspace

I was the main person behind the complex backend parts of this site. I even helped move the entire site to production, and supported my team throughout two major phases of the project.

- WWE.com

Here, I put A/B tests on different web pages to see where ads get the most clicks. It was mainly to figure out the best spots to place ads for users to see and interact with.

- Aavid.com

My main job was to integrate Apache Solr Search. This let users search for various products through different categories, making the search experience smooth and user-friendly.

- ToughMudder.com

I set up a feature that supports multiple languages and helped in the backend to allow lots of media uploads. This made the website look good and work well on mobile devices too.

Each project taught me something new and allowed me to use my skills in different ways. I made sure all the websites not only looked good but also worked efficiently and met the clients' needs.

Frontend Developer

Corgibytes

September 2011 to July 2013

At Corgibytes, my role as a Frontend Developer also provided the opportunity to build upon backend development skills, combining both to modernize and maintain existing software systems.

Key responsibilities:

- Utilized frontend technologies such as JavaScript, jQuery, and early versions of AngularJS to rejuvenate legacy systems, enhancing user interfaces and experiences.
- Gained valuable backend development experience, working with technologies like PHP and MySQL, and integrating frontend components with servers using RESTful APIs and AJAX methods.
- Leveraged emerging cloud services like AWS for deployment and maintenance, aligning with the trend towards cloud-based software solutions.
- Maintained high standards of clean code and architectural efficiency, consistent with Corgibytes' commitment to "software remodeling."

At Corgibytes, I refined my frontend and backend skills, harnessing technology trends to improve user interfaces, streamline backend processes, and revitalize software in line with the company's mission.

Education

Bachelor's degree in Computer Science

University of Wisconsin-Madison - Madison, Wisconsin, US

2007 to 2011

Skills

- React
- Node.js
- Express.js
- Vue.js
- JavaScript
- RESTful API
- PHP
- Laravel
- jQuery
- PostgreSQL
- MySQL
- AWS
- Drupal
- WordPress
- Bootstrap
- Git
